MISSOURI SCHOOL OF MINES AND METALLURGY

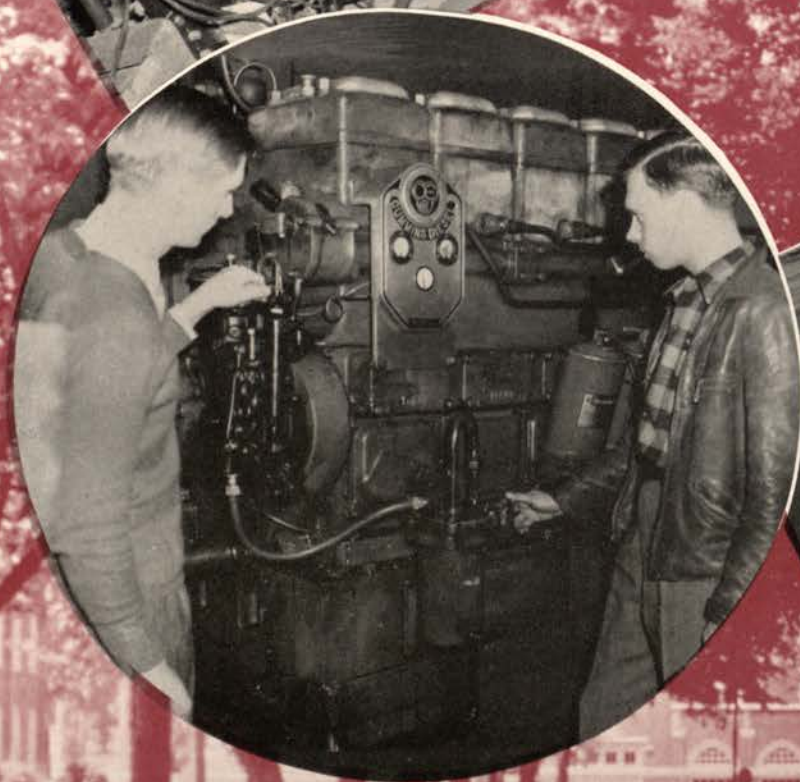

W. A. 1888

The 1943

Rollamo

THE NINETEEN FORTY-THREE ROLLAMO

MISSOURI SCHOOL OF
MINES & METALLURGY
ROLLA, MISSOURI

Foreword

We feel that this "ROLLAMO" will serve to portray your days at M. S. M. as you will always want to remember them.

We hope that the various changes and rearrangements will gain your whole-hearted approval and wish to thank you for your splendid cooperation, which has made this, your "1943 ROLLAMO" possible.

CONTENTS

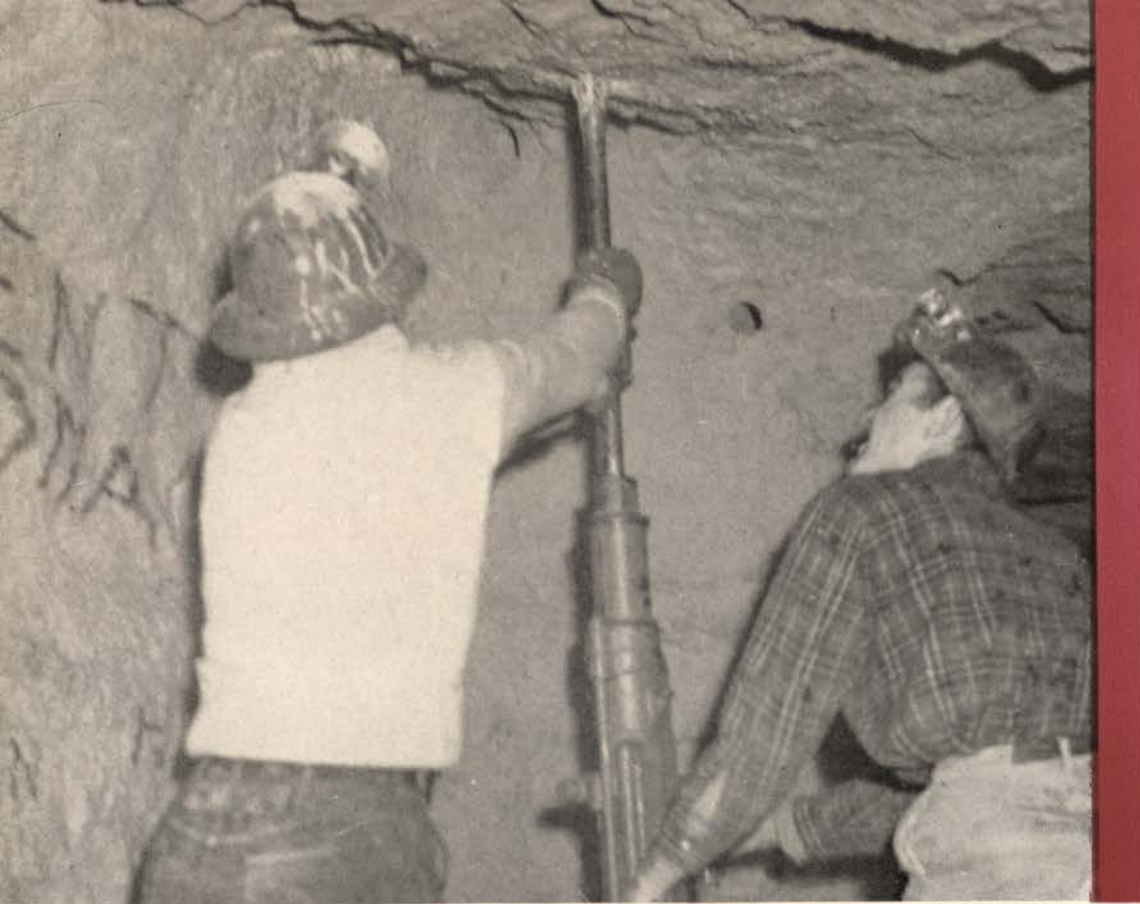

Dedication

With this, the 1943 ROLLAMO, we salute all those Missouri Miners who have temporarily sacrificed time from their chosen profession to help win this war. Their traditional "Fighting Miner" spirit, coupled with the knowledge acquired here at M. S. M. will continue to contribute materially to an ultimate Allied Victory.

MINING ENGINEERING

PALEOLITHIC MAN, mining the flints which were the mineral wealth of civilization some 450,000 years ago, might be called the early predecessor of the modern mining engineer. Mining engineering has since that time been characteristically based on a continued and increased application of the principles of basic science and fundamental engineering knowledge to the problems involved in obtaining mineral wealth. Ore winning technique and ore finding technique have improved along with the demands of an ever growing industrial world to the extent that more ore has been mined in the twentieth century than in all previous history. The mining engineer leads the way by supplying raw materials for other branches of industry. In times of war, mining engineers are called upon to bend every effort to the finding and supplying of numerous strategic raw materials required for an ever hungry military machine.

Mining, petroleum, and mine geological engineering curricula are based on the needs involved in winning ores and solid fuels, developing and producing liquid fuels, and the scientific discovery of these materials. Class room and laboratory work is further clarified by inspections of important mining or petroleum operations available comparatively close to the school.

Mining engineering graduates are to be found in all countries and states, wherever mining activity exists. As in all other branches of engineering or industrial work, much depends upon the man—how hard he works and studies, how carefully he plans his personal campaign for success, and how well he succeeds in getting along with his fellow-workers.

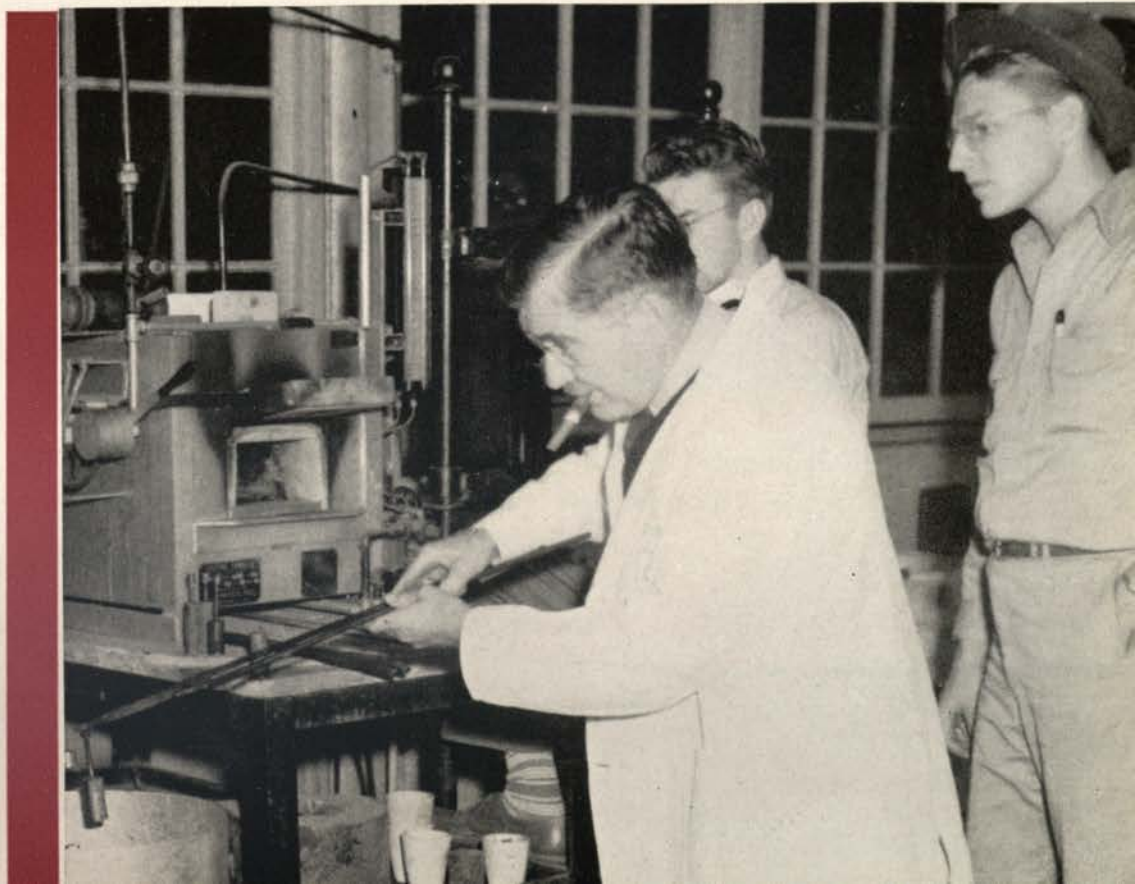

METALLURGY

METALLURGY may be defined as that branch of engineering that concerns the extraction of metals from ores and various types of concentrates, the refining of these metals, the manufacture of these metals, the manufacture of alloys, and then fabricating both metals and alloys into useful shapes for human utilization.

The metallurgical engineering student receives a thorough training in both Process Metallurgy and Physical Metallurgy. The necessary theory is substantiated with practical work in the various courses, and adequate equipment is available to give the student an opportunity to develop sufficient technique and be immediately useful upon entering his chosen profession. Further, the laboratories are well equipped for original research in pyro-metallurgy, hydro-metallurgy, or electro-metallurgy in the process metallurgical field; and for work in the various thermal, physical, and chemical tests as well as the study of structures, both microscopic and macroscopic in the physical metallurgical field.

During the past ten years, considerable progress has been made in both ore dressing and metallurgy; the use of the microscope, the spectrograph, X-rays, permeameters, magnetometers, sonic testing, and even Gamma-rays, are now employed to further man's knowledge of ores, metals, and alloys. The increased demand placed on the industry by the National Emergency is being met, and the Metallurgical Engineer stands out as one of the key-men in National Defense.

ELECTRICAL ENGINEERING

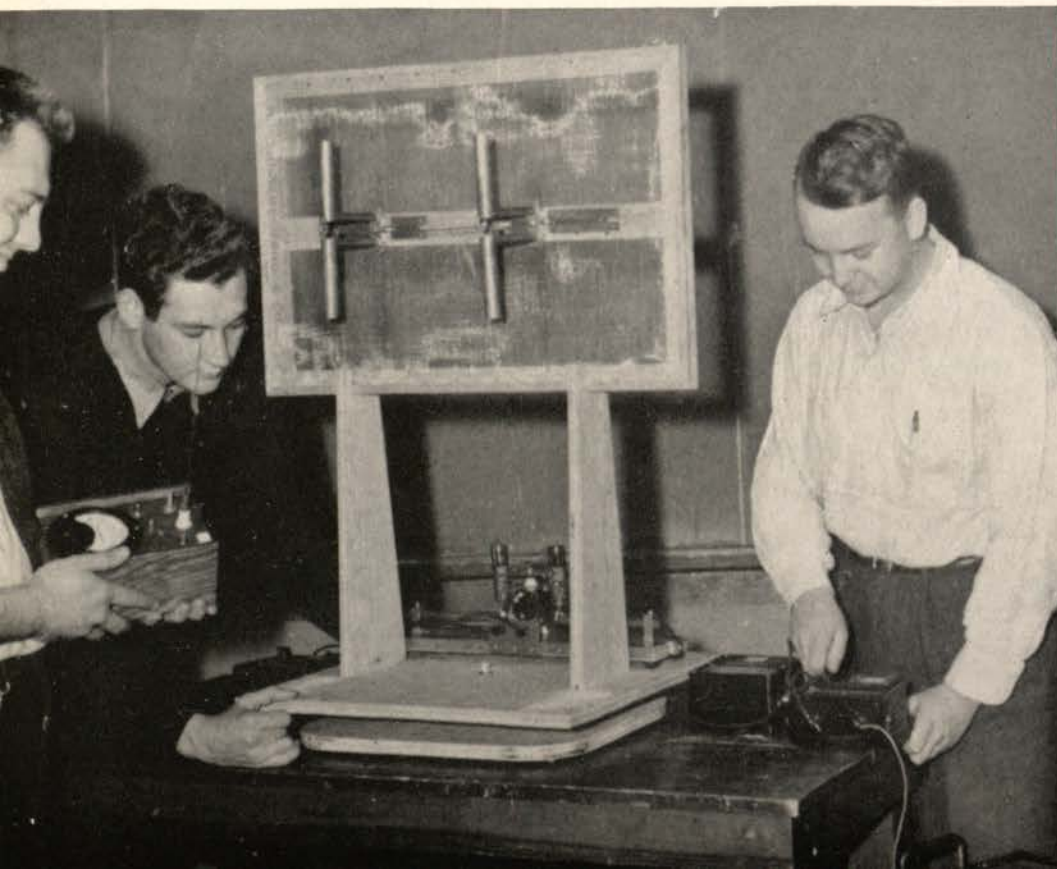

ELECTRICAL ENGINEERING may be defined as the practical application of electricity to the needs of man. The history of the development of its fundamental principles may be considered as beginning with the first use of magnetism nearly 5,000 years ago.

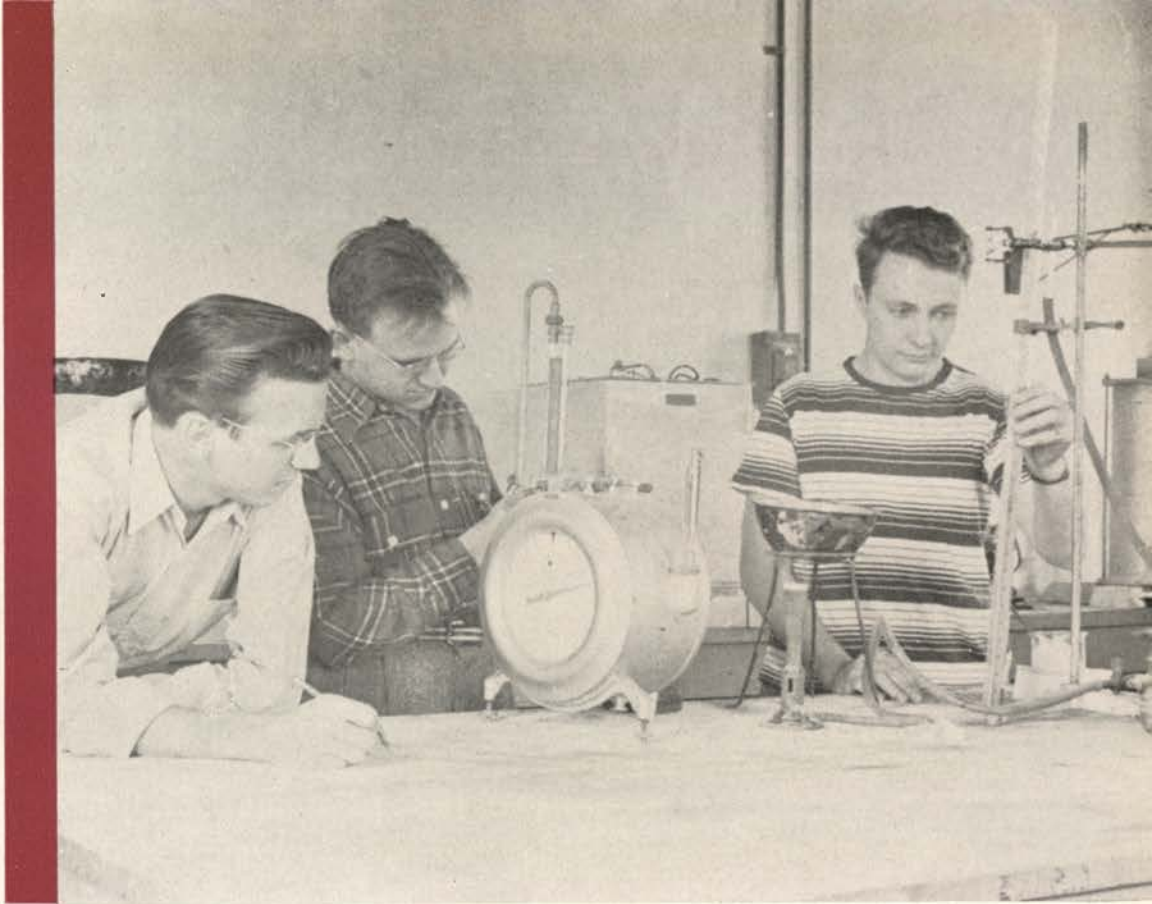

Electrical engineers, in the many branches of the field, serve the entire world. At present the emphasis is on Power and Communications engineering—the generation, transmissions and distribution of power necessary to keep manufacturing plants in operation and the design, operation and maintenance of wire and radio communication systems vital to the successful waging of war.

The fundamental principles underlying electrical phenomena are the same in all branches of electrical engineering, therefore, in the curriculum at the Missouri School of Mines, emphasis is placed on the fundamental principles, rather than their application in a special field.

Theoretical classroom work is accompanied by laboratory courses to present the fundamental electrical testing methods, and to aid the student in the formation of habits of laboratory observation and proper preparation of technical reports.

The Electrical Engineer who enters industry finds employment in such departments as test, design, application, construction, patent law, research, sales and administration. The future of the electrical engineering profession is most promising as the "Electrical Age" is in its infancy.

CERAMIC ENGINEERING

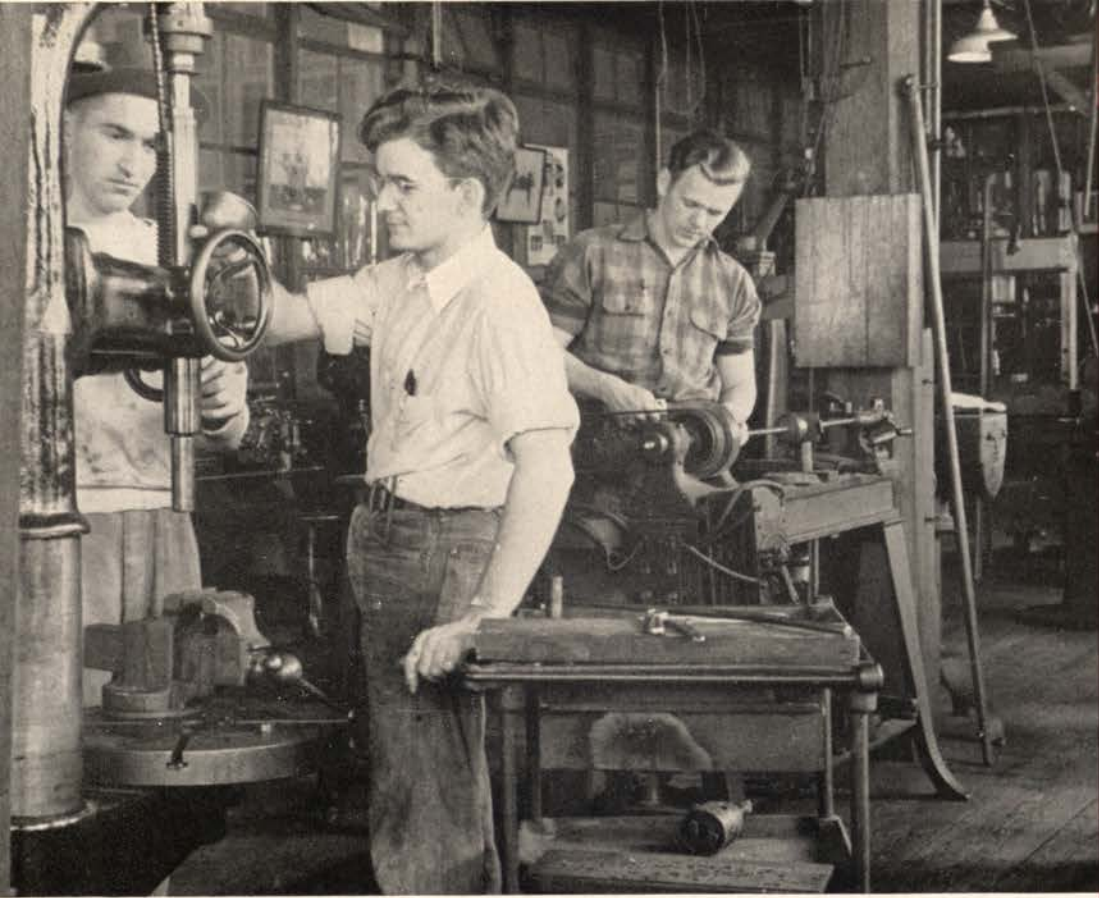

CERAMIC ENGINEERING is that engineering concerned with the manufacture of products useful to civilization from the non-metallic, inorganic-material, in the processing of which high temperatures are employed. The ceramic branch of engineering includes the following fields of manufacture: structural claywares; refractories and fire brick; porcelain enamelware; glass wares; electrical porcelain; dinnerware; abrasive wheels; and cements, limes and plasters. These products are greatly needed by our present-day civilization and have made possible many of the marvels of the modern age.

The students in the Ceramic Engineering course receive a well-grounded basic course in chemistry, physics, and mathematics before branching out into the various ceramic subjects. The most important of these is chemistry, since ceramics is vitally concerned with high-temperature chemistry, or the reactions which take place in various mixtures when they are heated to the extremely high temperatures usually employed.

The Missouri Clay Testing and Research Laboratories are operated in connection with the Ceramic Engineering Department, which allows ceramic students to gain an intimate knowledge of standard testing methods and research procedure.

Since 1898, when ceramic education began in America, less than two thousand graduates have gone out into this oldest and most diversified industry composed of more than thirty-five hundred plants in the United States. During the present war emergency, the demand for ceramic engineers is even greater while the supply is seriously depleted.

MECHANICAL ENGINEERING

THE LAST FEW DECADES have witnessed a very rapid development in mechanical processes and transportation, notably the airplane.

Mechanical Engineering comprises the science and technology of power generation of mechanical transmission of power, and of the production of machine tools and their products. In addition to the research, design, development, and investigation required in creating these services and products, mechanical engineering includes the organization of men, money, and materials and their coordination for effective and economic production.

Mechanical Engineering at M. S. M. is taught with the object of giving the student a comprehensive training in the fundamentals of mechanical engineering which will be of use to him in practically any industry which he might choose to enter.

After the present war a large reserve of professional men will be needed to supervise a vast reconstruction program. The complex problems encountered will involve the establishment of new inter-connections-laws of communication and understanding between fields of human activity that in the past have been held separate. The solution of these problems and the restoration of the war-torn world will in no small measure be effected by the mechanical engineer.

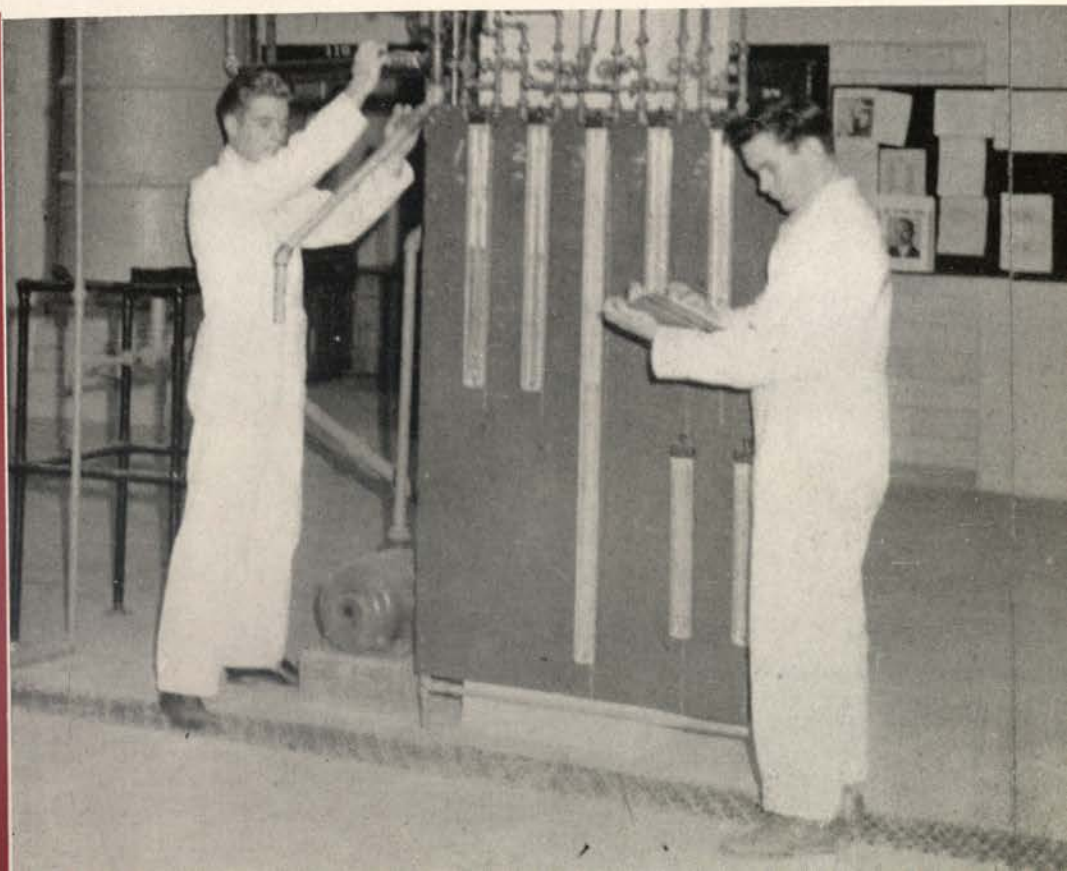

CHEMICAL ENGINEERING

THE ROLE OF THE CHEMICAL ENGINEER in the industrial world is to translate chemical (laboratory) processes into profitable manufacturing operations. These usually involve the co-ordination of chemical reactions as well as unit physical operations.

The training of chemical engineers supplies the foundation and tools needed to start a professional career. Organic, inorganic, analytical and physical chemistry; mathematics, physics, mechanics and economics form the basic training for the professional chemical engineer. Industrial stoichiometry, chemical engineering unit operations, design and thermodynamics emphasize the professional aspects.

The chemical engineer will be found in every large industrial organization participating in the rapid march of progress. His duties may confine his efforts to the executive department, research development, plant and equipment design, plant construction and operation, process control or technical sales.

The Chemical Engineering Department of the Missouri School of Mines and Metallurgy has moved into the new building which was completed in the summer of 1941. The work of the department is now carried on in this portion of the new building and the old chemistry building. The new building is essentially devoted to laboratories for chemical engineering, organic, analytical and general chemistry. It is excellently equipped with modern apparatus needed in the instruction and research program.

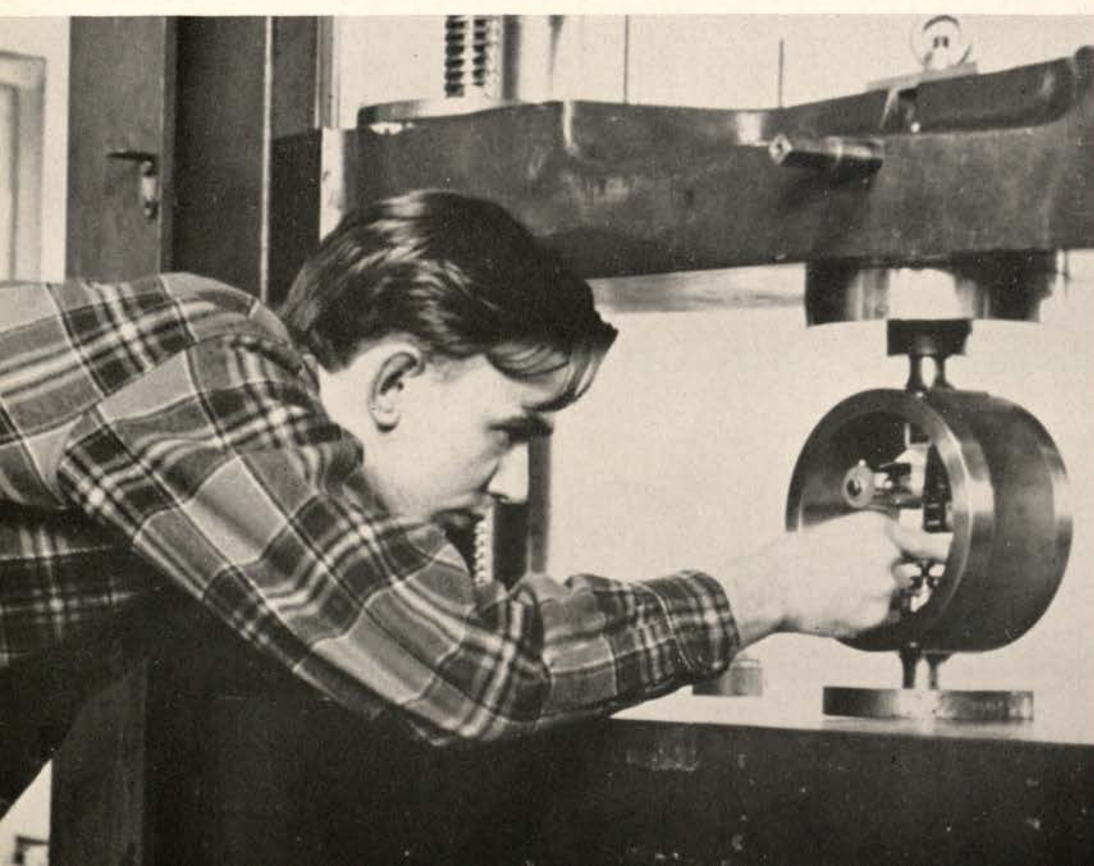

CIVIL ENGINEERING

THE PROFESSION OF CIVIL ENGINEERING is indeed a broad one and is often credited as the parent stem, which in the early development of engineering included all branches of the constructive art with the exception of Military Engineering.

In its restricted sense, Civil Engineering may be said to include: the establishment and relocation of private, state and national boundaries; the providing of accurate maps of coasts and various parts of the country; the location, construction, and maintenance of pipe lines, canals, highways, and railways; the design, construction and maintenance of river and harbor improvements, flood-protection works, important structures; and reclamation of unproductive areas; municipal engineering and testing of engineering construction materials.

Civil Engineering students at the School of Mines receive a thorough, well-rounded training. However, a judicious selection of elective courses will provide opportunity for specialization in Highway, Hydraulic, Structural or Sanitary Engineering. M. S. M. graduates have made an admirable record in all phases of Civil Engineering and their efforts have contributed materially toward the advancement of their profession.

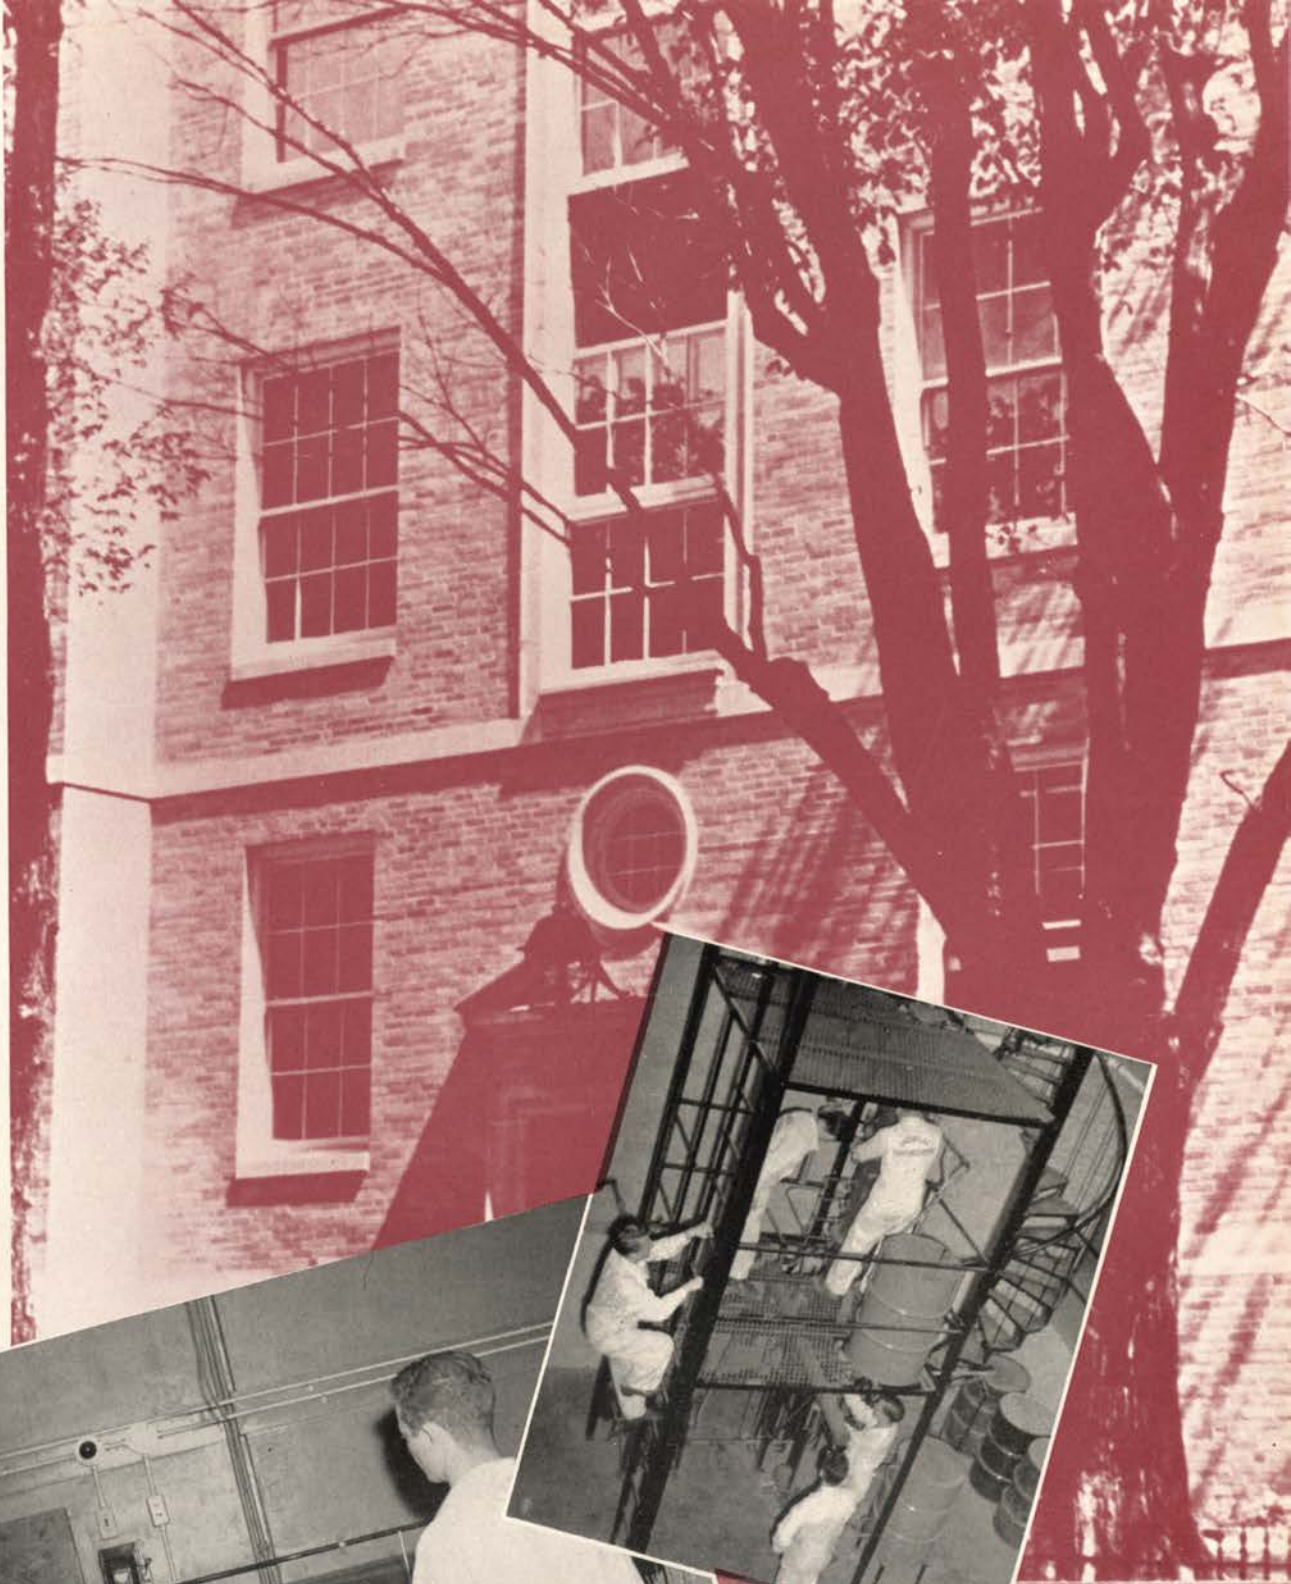

Book One . . . COLLEGE

College

M. S. M. is ranked very high among the colleges of its type in the country. It is a technical engineering institution, sponsored by the State of Missouri, and has functioned as such since its beginning in 1871. The continued success of its alumni is indicative of the thorough manner in which the college prepares its students in the theory and application of the various engineering courses, and to those who are in search of such a proficient engineering education, M. S. M. surely merits a first consideration.

Dean

Dean Wilson has performed a truly admirable job during his two years in office. His rational decisions coupled with a magnetic personality have allowed him the total support and cooperation of the entire school. Under the present conditions of a national emergency he has, and will undoubtedly, in the future, keep M. S. M. an engineering institution worthy of the highest merit possible.

ADMINISTRATION

Assistant Registrar

Mr. Noel Hubbard in his many years at M.S.M. has exhibited an enduring patience hard to equal. Beside executing his various school business duties with praiseworthy efficiency, he has employed this patience in aiding the students with the various problems which from time to time confront them. As a result of the latter he has become known to all on the campus as "the man to go to for assistance."

FACULTY

THE STAFF OF COLLEGE LIFE

Alsmeyer, W. C., B.S., Instructor in Civil Engineering

Barley, J. W., A.B., A.M., Ph.D., Professor of English

Bertram, W. B., LL.B., Instructor in Military Science and Tactics

Black, C. H., B.S., Assistant Professor of Engineering Drawing and Descriptive Geometry

Boltz, D. F., B.A., M.S., Instructor in Chemical Engineering

Boyd, C. E., A.B., A.M., Instructor in English

Bullman, G., A.B., LL.B., Instructor in Physical Education

Butler, J. B., B.S. in C.E., B.S. in Education, M.S. in C.E., Professor of Civil Engineering

Cagg, M. H., B.S., A.B., M.A., Assistant Professor of English

Campbell, G. L., B.S., B.S., Librarian

Carlton, E. W., B.S., M.S. in Industrial Education, B.S. in C.E., Professor of Structural Engineering

FAREWELL

We have reached another of the great milestones in our life. Hereafter our activities and interests must be altered to direct us on the road to professional success.

Indeed these have been four memorable years of intensive but enjoyable study, and let us say that though industry and the present world crisis send us to the very extremes of the globe we shall always feel that M. S. M. has given us that valuable fighting spirit and indefinable entity for which we shall always be grateful.

Book Two . . . ACTIVITIES

Activities

A vital asset toward the making of a well-grounded college career is the participation of the student in extra-curricular activities. These are valuable to the student not only as a means of attaining some administrative experience but also as a medium of relaxation and friendly companionship during his years at college.

PHI KAPPA PHI

Phi Kappa Phi, national honor society, installed its chapter on the M. S. M. campus in 1920. During its twenty-three years of activity on the campus it has been recognized as the outstanding honor society at M. S. M.

Membership is limited to the upper ten per cent of the graduating class and those graduate students whose scholarship merits award. Character and service are also attributes which are stressed when electing members.

At the beginning of each year the society awards a bookplate bearing the society's seal to each member of the upper fifteen per cent of each class.

Tau Beta Pi was founded at Lehigh University in 1885. The Beta Chapter of Missouri was founded at M. S. M. in December 1906. Since that time it has risen to become the highest ranking honorary engineering fraternity on the campus.

The purpose of the fraternity is best stated in this preamble: "To mark in a fitting manner those who have conferred honor upon their Alma Mater by distinguished scholarship and exemplary character as undergraduates or by their attainments as alumni; and to foster a spirit of liberal culture in the Engineering schools of America."

BLUE KEY

Blue Key is a national honorary, non-social fraternity. Its primary purpose is service, in any way possible, to the school.

Members of Blue Key are chosen from the upper fourth of their class and must have indications toward leadership and be active in events on the campus. Candidates for pledging are judged upon personality, character, good fellowship, and willingness to serve the school.

This year the chapter has been very active and has provided many service achievements. Some of them are the compilation and publication of a Student Directory, the operation and maintenance of the scoreboard for basketball games, a smoker for the Freshmen, ushering facilities at school affairs, and awarding of shingles to the upper 10% of the Freshman class.

Theta Tau is a professional engineering fraternity whose first chapter was founded at the University of Minnesota, October 15, 1904. The eighth chapter, the Iota Chapter of the Missouri School of Mines, was established here on February 5, 1916.

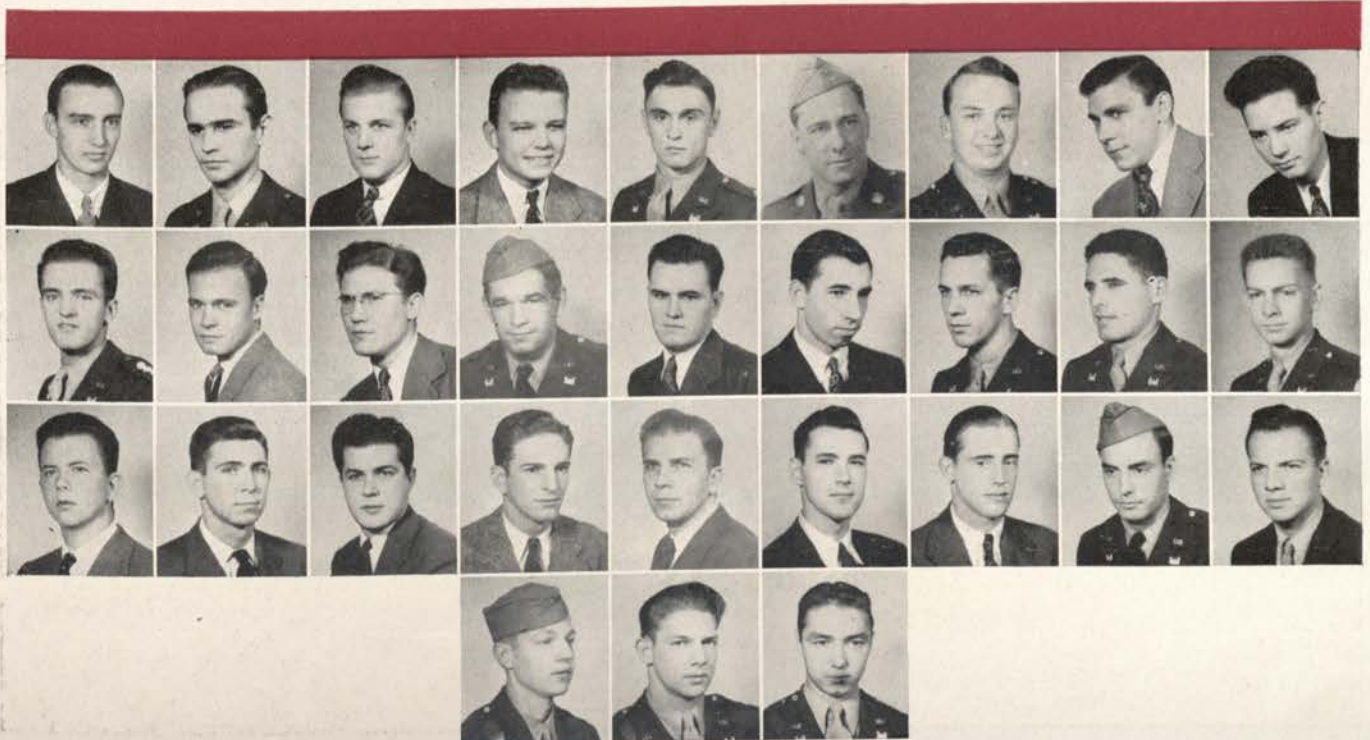

Membership in Theta Tau is not based altogether on high scholastic standing; its members are selected from those students who have the most promising engineering ability in general. The purpose of the organization is to stimulate a high standard of professional interest and ethics among its members. The rituals and ceremonies of the meetings are in themselves symbolic of this purpose.

The Beta Delta Chapter of Alpha Chi Sigma, Professional Chemical fraternity, was established on this campus in 1936. The national organization was founded in 1902 at the University of Wisconsin and at the present time there are forty-six active collegiate chapters, 17 professional chapters and 9 professional groups.

Through the efforts of the chapter a true and lasting friendship is attained among its members. The chapter also strives for the advancement of chemistry both as a science and a profession.

The fraternity sponsors an annual Alpha Chi Sigma Dance, a safety program throughout the Chemical Building, a chapter publication, "The Beta Delta Data," and a Chemical Magic Show for Parent's Day.

Beta Omicron Chapter of Alpha Phi Omega was founded on the M. S. M. Campus in the spring of 1939. The membership is limited to students who have at some time been associated with the Boy Scouts of America. The fraternity's aims are to promote service and to live in the fellowship of the Scout Oath and Law.

The organization extends to the campuses of ninety-nine colleges and universities.

The services of the local chapter include: maintenance of a student book exchange, assisting the local Boy Scout Troops, a finger-printing program, providing a guide service for Parent's Day, and decorating the gymnasium for Commencement Exercises.

Established for the purpose of furthering national defense and linking more closely civilian and military engineers, the Society of American Military Engineers had its origin in the World War I and was incorporated in 1920 in the District of Columbia.

The local Post was established in the fall of 1937 and has each year since sponsored the annual Military Ball.

Up and Over

R.O.T.C. Band

R. O. T. C.

A Blue Star Regiment

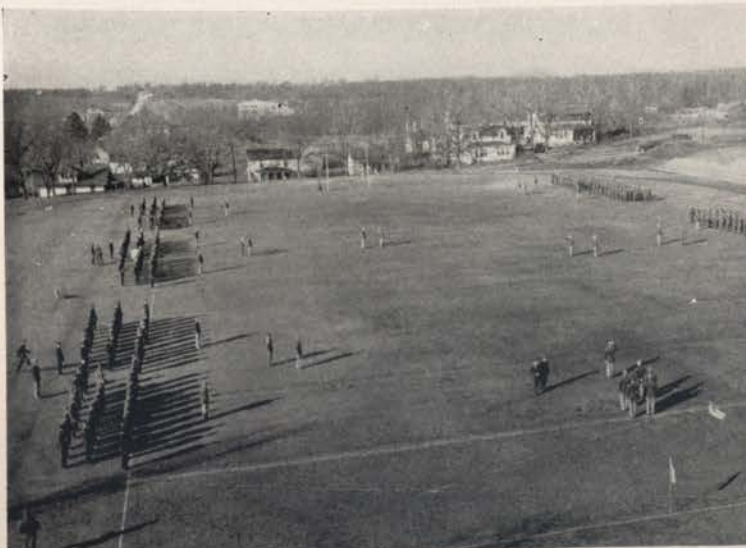

Established on this campus in 1919, the Engineer unit of the R. O. T. C. has been an active organization, growing with the school. The purpose of the program is to procure and train young men in order to provide a reserve for the U. S. Army, to be used in time of national emergency such as now exists.

In keeping with the national efforts intensive training is now being administered in combat principles in conjunction with a well planned physical training program.

Last spring the unit maintained its rating of "Excellent" at the federal inspection.

This year the Cadet Colonel is Donald J. Coolidge.

This organization holds monthly meetings, where talks are given by students themselves as well as by men prominent in this type of engineering. Through the medium of these talks, informal discussions and through the monthly journal published by the Institute, important and valuable information is brought to the attention of the student members. It thus enables the students of the mining and metallurgy departments of the school to discuss the current problems confronting their fields more intelligently.

In order to give the students a chance to discuss the current problems confronting the Electrical Engineering field, the American Institute of Electrical Engineers was established on this campus.

Reports given by professional men as well as students themselves are invaluable to the students in that they learn something about the practical application of their electrical engineering knowledge. The society helps the student to familiarize himself with the parliamentary procedure and organization of learned societies.

The American Society of Mechanical Engineers has been on the campus of M. S. M. since the spring of 1930. It was organized by Dr. Aaron J. Miles.

The principal objects of this student branch are to add to the student's acquaintance the practical side of Mechanical Engineering; to keep in touch with engineering progress; and to help the student meet men who are engaged in the actual practice of engineering. Students are also offered the opportunity for self-expression on technical topics by the presentation of formal reports, both written and oral.

The purpose of the American Institute of Chemical Engineers, formerly the Ira Remsen Society until 1939, is to band more closely together the student members of this profession and to stimulate interest in the field of Chemical Engineering. This is made possible by holding meetings twice each month, at which the student members themselves may relate actual experiences encountered during summer employment. Occasionally, prominent engineers are invited to address the society.

In this way the student members are able to combine the theoretical as well as the practical side of their engineering field.

AMERICAN CERAMIC SOCIETY

The American Ceramic Society made its first appearance on the campus of the Missouri School of Mines in 1937. Formerly called the Orten Society after General E. Orten, Jr., founder of the first Ceramic Engineering Department, it has as its fundamental purpose the sponsoring of informative meetings at which time leaders in this field of engineering bring to the students the new methods and developments of Ceramic Engineering. As a result of these meetings, the members are banded closely together in their profession.

The American Society of Civil Engineers has been on the campus of the Missouri School of Mines for twenty years, being organized in 1923 by the Junior and Senior Civil Engineering Students with the aid of Professor J. B. Butler.

The local chapter is a chartered member of the national organization which is the oldest engineering society in America. One of the interesting and beneficial phases of the society is the lectures and reports on engineering conditions and problems given by prominent engineers.

The Student Council was founded here in 1937, and has been functioning ever since that time. The Council consists of sixteen students. There are eight representatives from the Independents and one representative from each of the nine remaining social fraternities.

The Student Council at the Missouri School of Mines is an organization whose purpose is to maintain an efficient and just form of student government through its mutual relationship with the student body and faculty.

As a means to maintaining a student government, the Council appoints the Rollamo and Miner Board of Control, St. Pat's Board of Control, Dance Date Committee, and the General Lectures Committee. These committees exercise supervisory control over their respective activities.

The St. Pat's Board was established in 1930. The Board consists of twenty members. There are two representatives from each fraternity and four from the independents.

The Board is appointed each year to make all of the arrangements for the annual celebration which pays homage to the Patron Saint of Engineering, St. Patrick, and also sponsors several dances during the year for the entertainment of the student body.

This year, because of the accelerated program here at MSM, the patron saint speeded his visit to this campus, appearing in December at the first Annual Winter Carnival held here. In order to stimulate interest in the Winter Carnival, the Board awarded a plaque to the fraternity having the best decorated house in keeping with the spirit of the celebration.

BOARD OF CONTROL

JUNIORS	SOPHOMORES	FRESHMEN
M. Sievert	J. McGovern	K. Rasmussen
D. S. Smith	R. Ray	J. Schmitz

In 1935 the non-Fraternity men on the M. S. M. Campus organized "The Independents." The object of this organization, as outlined in its constitution, is to organize the non-fraternity men so they can better participate in the various athletic, social and other activities on this campus. The organization was designed to meet the needs of that large group of men who would have no other means of participation in campus activities.

All students, who are not members of social fraternities on the M. S. M. Campus, are eligible for membership, and will become active members upon the payment of their annual dues. The Independents sponsor two dances each year, given at the school gymnasium, to which all students are invited. Its members are actively engaged in all the various intramural sports and social activities on the campus.

ALPHA PSI OMEGA

OFFICERS

<i>President</i>	P. F. Shatto
<i>Vice-President</i>	W. Hoereth
<i>Secretary-Treasurer</i>	Mary Wilson

Alpha Psi Omega is a national honor dramatic society. The Alpha Chapter was founded at Fairmont State College, Fairmont, West Virginia.

The M. S. M. cast, Delta Phi, was granted a charter in May 1934, replacing the organization known as the M. S. M. players.

Membership in the Delta Phi chapter is limited to students and faculty members of the School of Mines, who have taken part in at least two productions, and to persons, who, because of extraordinary interest in dramatics, have been granted honorary membership.

THE "M" CLUB

OFFICERS

<i>President</i>	M. K. Main
<i>Vice-President</i>	F. M. Kiburz
<i>Secretary</i>	E. S. Fris
<i>Treasurer</i>	L. G. Spinner

The "M" Club was founded in 1938 as an organization to aid in raising the standard of sportsmanship around the Missouri School of Mines campus and to create a better feeling of fellowship among members of the athletic teams. Since its organization four years ago it has advanced considerably both in size and popularity.

The members encourage a larger number of men to participate in the sports of our school, lend assistance at the various athletic contests, give several dances each year to which the public is invited, and perform other functions of service to aid in increasing school morale and distinguishment.

GLEE CLUB

OFFICERS

<i>President</i>	G. L. Tuer
<i>Vice-President</i>	W. T. Rule
<i>Secretary</i>	R. F. Ollis
<i>Treasurer</i>	H. W. Flood

The Glee Club started in the fall of 1942, being composed of students who like to sing and want to give enjoyment to others through music. In the six months of its existence the club has grown and become a very active unit on the campus.

The club made Fred Warings new song "Fight Missouri Miners" familiar to the students. They sang for the Thanksgiving service held at the school and at the Christmas program spread the Christmas spirit with carols. They also sang at the Baccalaureate Exercises held for the January graduating class.

The M.S.M. Chapter of the American Society for Metals was organized as a student chapter of this National Society and was established in October, 1937. The national organization is composed of 60 chapters with a total membership of more than 16,000 members. Membership in student chapters is open to junior and senior students in metallurgy, and national membership is open to graduates who become directly connected with the metal industry. The aim of the A.S.M. is to promote the arts and sciences connected with the manufacture and the treatment of metals, and thereby aid in the advancement of metal industry.

1943 THE MINER BOARD

The Editors

Staff Members

Published bi-weekly by a staff of editors and reporters, who compose the Miner Board, the *Missouri Miner* has as its primary aim, the general coordination and up-building of the Missouri School of Mines. It serves as a medium for exchange of student ideas.

Somewhat secondary in scope, the Miner offers to aspiring individuals the opportunity to learn the craft of writing—not just for the journalism's sake, but for the sake of engineering.

The Board which controls the Miner is organized into Business, Advertising, Circulation, and Editorial departments. Membership is limited to those who have served as tryouts for a year and who have lived up to qualifications laid down by the Board.

Starting its twenty-ninth year, the Miner has blossomed out from tabloid size into a full size seven-column sheet.

1943 THE ROLLAMO BOARD

Staff Members

Editorial Staff

The Rollamo Board, a group of students representing all phases of "Miner" life, functions for the sole purpose of compiling and editing in the form of a yearbook a lasting memorial to the student activity of the past year. The book is, in a large measure, dedicated to the students both singly and as a whole and for this reason is planned so as to include as large a scope of the variegated student interests as possible. Though the Seniors are largely featured because of their natural tendency toward campus leadership, this book should represent to all a true bill of happenings for the 1942-1943 academic year at M. S. M. With this desire to record this year in your life and to bring pleasant memories of such in the years to come, the 1943 Rollamo Board has functioned to produce this book.

Formerly called the M. S. M. Forum, the Shamrock Club was first organized in March, 1938. Its prime purpose is to maintain a high standard of living for its members and to promote interest in school activities.

The club is governed by a six-man Board of Control, the members of which are elected on a basis of merit and personality.

ENGINEER'S CLUB

The Engineer's Club is the oldest of the three student "co-ops" on the campus. This organization was founded to obtain better and more economical meals for many of the Independent students. The club not only maintains a high standard of living for its members, but also tends to promote fellowship and stimulate interest in campus activities.

The Engineer's Club is ruled by a six-man Board of Control, the members of which are elected on the basis of capability and personality.

The Tech Club was organized in 1939 to provide a high standard of living for Independents at a reasonable cost. Under the efficient management of a Board of Control and four officers, this young organization has become one of the foremost organizations of its type on the M. S. M. campus.

This organization fosters social activities among its members, through outing, and similar affairs. It also is one of the co-sponsors of the annual Tri-Coop dance.

The Tech Club was awarded the Tau Beta Pi scholarship cup for both semesters of the 1941-1942 scholastic year.

Seniors

Juniors

Each of the social fraternities on the campus elects a Junior and Senior representative to participate in this council.

The council business includes the plans for social rushing, athletic activities and discussion on any such matters affecting the fraternities. It sponsors the Interfraternity Ball and sets the dates of all other fraternity dances.

During the past year the council has introduced three new interfraternity awards: the scholarship cup, the Interfraternity Sing cup and the plaque for the best fraternity man of the year.

INTERFRATERNITY SING PLAQUE

The first annual Interfraternity Sing, held in the fall of this year, proved to be quite a success. Each fraternity on the campus entered a chorus which was judged by a group of musically inclined judges. It is our hope that we have created another permanent activity for friendly competition among the fraternities.

INTERFRATERNITY SCHOLARSHIP CUP

This cup is presented in the hope of creating competitive scholarship achievements among the fraternities. The cup is awarded each semester to the fraternity credited with the highest "grade point."

FRATERNITY MAN OF THE YEAR

The purpose of this plaque is to give due merit to men who deserve recognition but seldom get it. Each fraternity chooses from its senior class one man whom they wish to represent their house. This list of men is then judged by a group of the school's professors to determine the most qualified man for the honor.

Book Four . . . **ATHLETICS**

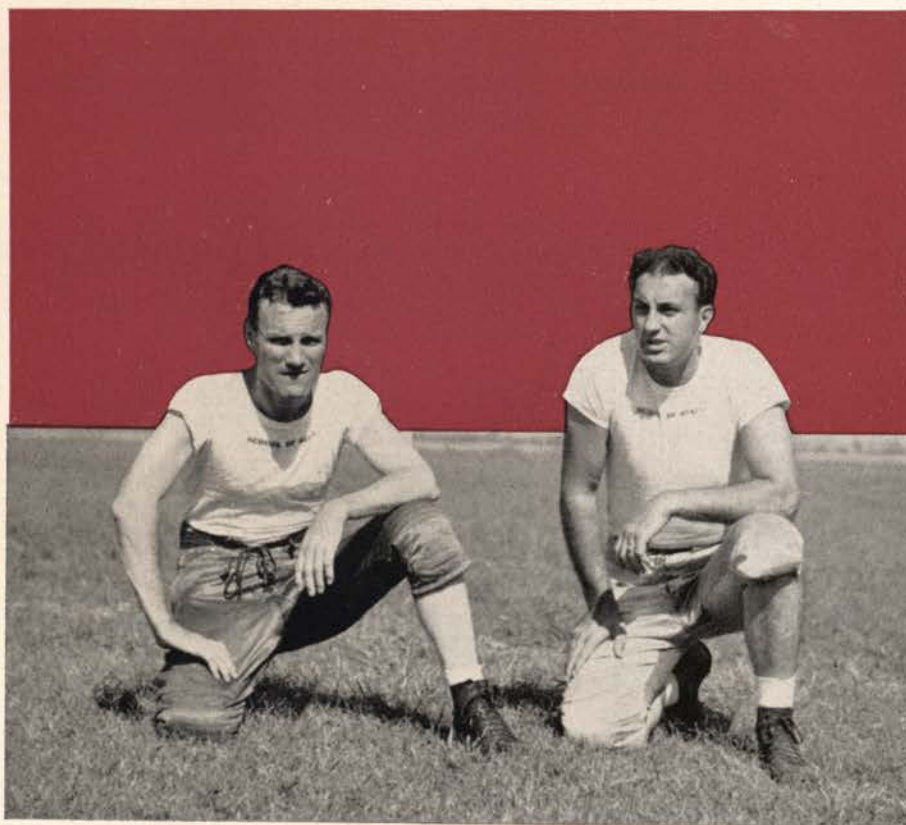

Athletics

Unlike many schools, athletics are not subservient to the educational aspects of our school. M.S.M. teams have gained their share of athletic renown.

The coaching staff is to be congratulated for their excellent work, for the difficulties due to late classes have cut practice hours to a minimum. In spite of this they have developed in their teams, teamwork and coordination that is an excellent tribute to their coaching skill.

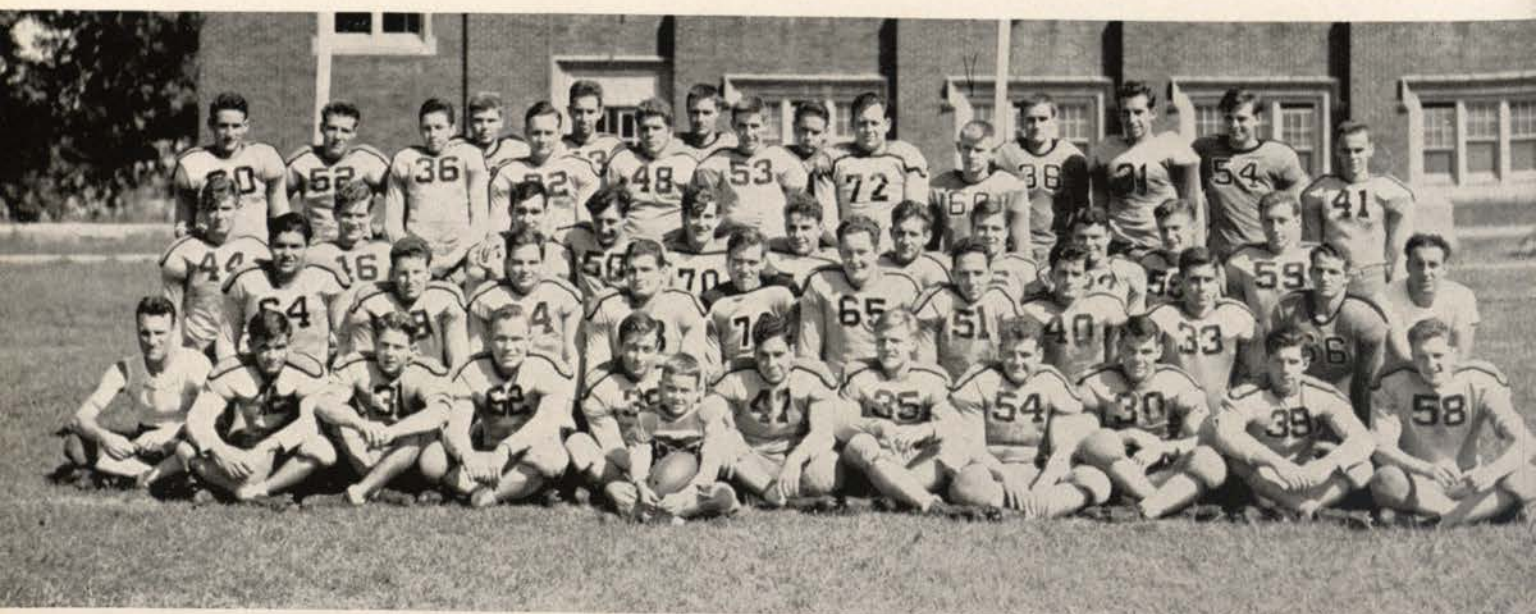

COACHES BULLMAN
AND HAFELI

SEASON RESULTS

St. Louis U.	14	Miners	7
Maryville	22	Miners	13
Warrensburg Mules	7	Miners	32
Fort Leonard Wood	0	Miners	53
Springfield	0	Miners	13
Cape Girardeau	7	Miners	6
Washington U.	19	Miners	6

FOOTBALL

After driving to a co-championship last year, the Miners took the field this year with the intention of bettering last year's record. However after the season's records had been tabulated, the Silver and Gold found themselves in third place in the MIAA conference.

In the first game of the season against St. Louis University, the Miners found themselves at the long end of a 7-0 score at the half. However, after proving that they could hold their own against the Billikens, the hopes of the Miner team were dashed when an intercepted pass gave the Billikens the lead with a final score of 14-7.

The Miners played their first conference game of the season at Maryville, and after a rough and tumble game found themselves on the bottom of a 22-13 score.

With a great show of power and drive the Miners rolled to their first victory of the season over the Warrensburg Mules. The final score in this Parent's Day tilt was 32-7.

In their next game with the Fort Leonard Wood Mules the Miners continued to show improvement as they rolled up a score of 53-0.

The Miners took the lead in the MIAA conference by downing the Springfield Teachers with a score of 13-0.

The closely fought Homecoming game against the Cape Girardeau eleven ended with the Miner team on the losing end of a 7-6 score.

For the last game of the 1942 season the Miners journeyed to the Washington Bears' Campus. After a hard fought game the Silver and Gold found themselves losing by a 19-6 score.

COACHING STAFF

Percy Gill, who was called to service in the Navy, was replaced by Dwight Hafeli of Washington University. With Gale Bullman these men had a man sized task of keeping the normal varsity and intramural programs going besides serving as physical education instructors for many service men stationed on the campus.

*Last minute instructions
Looking things over*

Get that man!

He's off

GRIDIRON GREATS

AL DICK—Al, outstanding halfback of the season and elected captain for next year's squad, a brilliant passer and a great line backer.

MEREDITH KIBURTZ—"Kib" was the retiring captain and his great job at center earned him an all MIAA birth. "Kib" played his fourth season and probably played more than any other man.

EBERT MILLER—Miller was a reserve center and playing his third year of ball here at M. S. M.

JOHN MAZZONI—Old "St. Pat" was in there playing his fourth season and a bang up game for the Miners this year. Mazzoni was a starting guard.

JOE SUEME—Joe, who missed school last season, returned this year to play his last year—and a great one—at guard.

GALE FULGHUM—Gale probably has more love for football than any of the fellows. Gale was a sophomore and though rather light he was very aggressive. His next year should be extremely successful.

EARL KANE—"Killer" returned after missing a year and alternated between guard and center. His football career started originally as an end, so Earl has played almost every forward position.

NIEL WOODS—Neil left at the end of the season to join the Army. He was a titantic starting tackle and played his second year of football. He was the only man to letter as a freshman during his first year.

ANTON LEONE—"Lee" missed last year also but returned this year to earn his second letter. He played the other tackle position and was a great asset in the forward wall.

BILL WARING—Bill played his second year at the tackle position as a reserve. His fighting spirit will be missed on next year's squad.

MARVIN ENGELHARDT—Marvin was one of the two freshmen to letter and be a great player on our next team. He was also a reserve tackle.

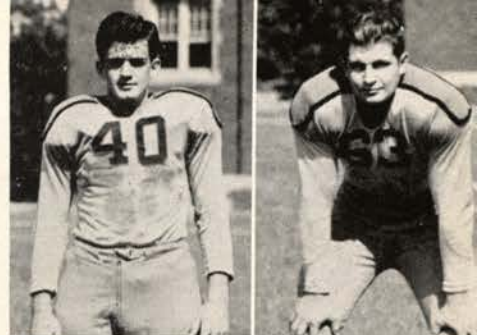

CHARLIE COUNTS—Chuck, a basketball star, utilized his height for some fancy pass snatching as a reserve end this season. Only a sophomore, Charlie has two more successful seasons.

CHARLIE MITCHELL—A trackman playing his second season. Charlie's speed gave him ability to run the ends and was termed a "scatback."

FINAL M.I.A.A. STANDINGS

GRIDIRON GREATS

JIM MILLER—Jim, the hard running halfback, continued in great form in this, his second year. With one more season this lad should be a cinch for next year's all MIAA.

JOHN MOORE—Johnny starred not only as a flashy pass catching end in football, but also in track and basketball. He was one of the few Miner athletes that ever lettered in three sports.

IRA PERKINS—A scrappy, 160-pound end, this man earned a starting birth in his first and last season. For his size he was a remarkable player both offensively and defensively.

ED FRIS—A light halfback, Ed played his first year and was a remarkable player for such little experience. Ed is a basketball man and a senior.

KEITH RADCLIFFE—Playing his fourth season, Keith was the brains of the squad as first string quarterback. The most improved man, Keith was probably the best punter in the conference.

MIKE CATANZARRO—Starting in football as a guard, Mike next played fullback and this season was second string quarterback. Oddly enough he carried the boys across the double stripe most of the time.

JIM STOVER—Bad luck kept Jim benched most of the season just as it did last year. A "sliding" halfback Jim's best performance was his touchdown against the Billikens.

GILBERT CARAFIOL—Last year a guard, Bullman moved "Gil" to the fullback slot and a wise move it was for "Gil" made the all MIAA as a sophomore this year.

JIM MCGRAPH—Jim was a reserve fullback during his sophomore year. Jim left for the service at the season's end and we all wish him luck.

JOHN HAZELETT—A sophomore end, John was a reserve this year and stood out on the offense.

THEO HOBY—Injuries kept Hoby, who was our best tackle, on the bench this season. Theo would have been a cinch for all MIAA had it not been for his bad luck.

JIM GLOVER—Playing his fourth year, Jim earned his second letter in the halfback position this year.

JACK BOETJER—The brilliant running of this flashy halfback made him a stand-out in the latter part of the season and he will surely be missed next season.

RAY SEABAUGH—Ray was the other freshman to letter this season. A guard, this lad will have a great football career here at MSM.

BASKETBALL

The M.I.A.A. Basketball Conference is known as one of the strongest in the Mid-West and competition this year was unusually keen. This helps explain the un-impressive record made by the Miners despite the fact that we had a well-balanced team on the floor.

Lack of experienced reserves seriously handicapped the team but with this barrier now surmounted we feel that the team will have a much more profitable season next year.

King wins Cross Country

Sueme evades Carafoil's left

INTRAMURAL SPORTS

Figure four

Monkey business

Almost

MINER ATHLETICS

This past season has seen the most successful Intramural program that MSM has ever carried on. The Kappa Sigs were the high ranking organization this year, closely followed by Sigma Nu and Theta Kappa Phi fraternities.

In keeping with the Army's physical fitness program, a new sport, the Obstacle Race, was added to the list of Intramural contests. The outstanding individual event of the season was the setting of a new time for the Cross-country Run of 4 min. 58.3 seconds by John King of Pi Kappa Alpha.

The number of participants in "Intramurals" this season was greatly increased. The entries in the six events totalled 791.

The winners in the various sports are as follows:

Table Tennis	Sophomores
Touch Football	Kappa Sigma
Cross-Country Run	Pi Kappa Alpha
Swimming	Seniors
Obstacle Course Run	Sigma Nu
Basketball	Kappa Sigma

Volleyball, track, horseshoes, golf, tennis and softball are not included in these results.

Behind the scenes

Book Five . . . **FEATURES**

Features

As in years past, this section portrays the lighter and more relaxing moments of our college life. The national emergency, however necessitated a premature graduation date this year and consequently, in this edition, the traditional St. Pat's Celebration has been replaced by its social equivalent of the year, the Winter Carnival.

WIN

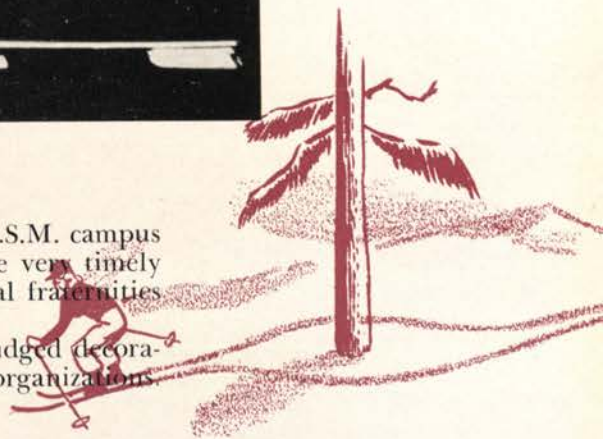

TER CARNIVAL

WINTER CARNIVAL DECORATIONS

The welcome afforded the King of Winter on his first visit to the M.S.M. campus was indeed a cordial and decorative one as was evidenced by some very timely and original decorations, which were displayed by the various social fraternities in an effort to make King Winter's stay a pleasant one.

A plaque was awarded by the St. Pat's Board for the best adjudged decorations erected, in the spirit of the Carnival, by any of the campus organizations. This year the award was presented to Triangle Fraternity.

THE CORONATION

The high-light of the Winter Carnival was the coronation of lovely Miss Adele Katz as the Queen of Winter.

The gym assumed an atmosphere of splendor and serenity and the Queen's Court was hushed as if some invisible hand had sealed the lips of the knights and squires of St. Pat and their ladies. As the first notes of the "Wearing of the Green" softly filled the gym, the retiring queen of St. Pat's, Miss Agnes Houlahan, escorted by Ray Kasten, took her place on the throne of honor and received the escorts and maids of honor representing the Independents and each of the fraternities. This group formed an awe inspiring reception line for her majesty's entrance. Graceful, alluring Adele was then received by her court and the crown of sovereignty was placed upon her head by Miss Houlahan.

Thus "The Queen of Winter" accepted the responsibility of serving as our patron saints representative until such time as he will once more visit M.S.M. and knight the graduating seniors.

ACKNOWLEDGMENT

We, the 1943 ROLLAMO, wish to extend our sincere thanks and appreciation to Mr. Owen Marsh of Pontiac Engraving Co.; Mr. Garth Bemis of Artcraft Press; and Mr. Obrien of Combs-Duval Studios for their generous assistance in editing and publishing this, your '43 ROLLAMO.

FINE ANNUALS

COLUMBIA, MISSOURI

MASTER ENGRAVERS TO AMERICA'S SCHOOLS

An American

TRADITION

For more than half a century Pontiac has been producing **QUALITY** printing plates for all types of publication work and has established a reputation for dependable service which is unexcelled among photo-engravers. Everywhere Pontiac yearbook service men have become known for their friendly, helpful assistance and are recognized for their ability as specialists in the school publication field.

It has become "An American Tradition" for schools to select Pontiac as their engraver year after year, with the result that the number of annuals handled by Pontiac has steadily increased. Hundreds of these staffs have developed distinctive books with the assistance of Pontiac artists and have gained recognition for the originality and success of their publications.

The entire personnel of Pontiac Engraving & Electrotype Co. salute the publishers of this book for their splendid efforts in producing a fine yearbook. They invite other schools to join the thousands of satisfied Pontiac clients for assistance in the solution of their engraving problems.

Pontiac served as the Official Engraver to this book.
